

# Insect Investigator

Look at all the different bug shapes! Circle the bugs with wings in blue.  
Circle the spiders with eight legs in green. And circle the bug with  
the most legs in red.

**WARNING:**

Some of our bug friends have ways to protect themselves that can be harmful to you. Please leave critters like spiders, wasps, bees, and ants alone.

# Insects & Spiders

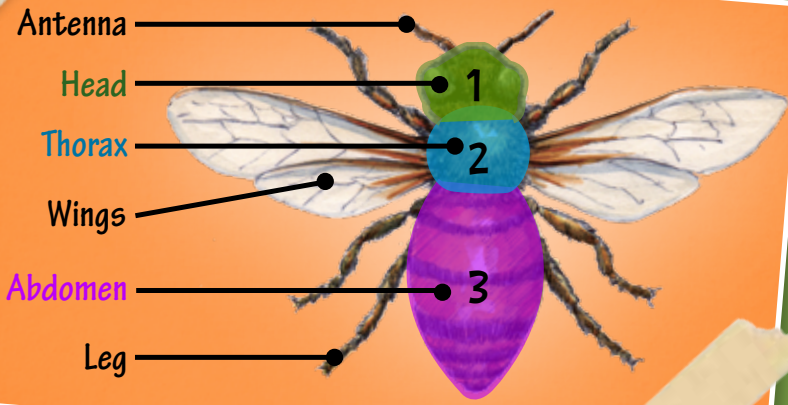

Bugs come in all sorts of shapes, sizes, and colors. Let's look at different kinds of bugs, and learn about their body parts.

# Insects

All insects have a three-part body with six legs.

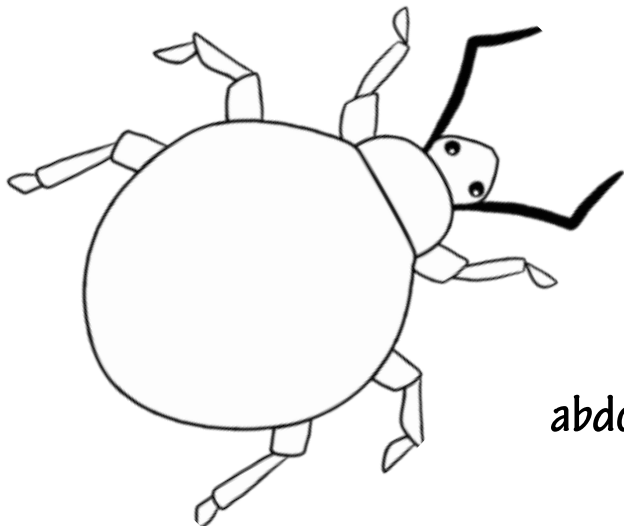

Insects have...

... a **head** with antennas, eyes, and a mouth.

... a **thorax** with six legs and sometimes a set of wings.

... an **abdomen** that holds the insect's organs.

Do you know the different bug body parts?  
Let's color each body part with a special color.

Color the...  
head **green**  
thorax **blue**  
abdomen **purple**  
legs **red**

Can you find these insects?

Spot any bugs? Draw one that you found in the magnifying glass below.

**Spiders** are different from insects.

Spiders have a two-part body and eight legs.

Spiders also have fangs and special body parts to help them build webs.

## Bug Shelters

Some bugs build their own shelters to live in.  
Have you seen any of these bug shelters?
